

# Adding colour to the great outdoors is easier than ever when you start with Resene Waterborne Aquapel and Terracotta Sealer

**Designed for use on terracotta pots inside and out, Resene Waterborne Aquapel & Terracotta Sealer is also suitable for use over a wide range of terracotta surfaces, including terracotta statues and ornaments.**

Simply apply to the surface to seal the terracotta and impart excellent waterbeading properties. Even if you wish to leave the terracotta in its original terracotta colouring, the Resene Waterborne Aquapel & Terracotta Sealer will help keep it looking good for longer.

It is also the ideal basecoat for overcoating with Resene decorative topcoats in your choice of Resene testpots or paints so you can add your own decorative flair in your favourite colours to terracotta pots, statues and ornaments.

Resene Waterborne Aquapel & Terracotta Sealer may also be applied over a Resene FX Faux Rust Effect finish to help protect the effect.

Resene Waterborne Aquapel is also available in a larger size for use as a water repellent on larger projects.

# Bring the beauty of rust...

## with Resene FX Faux Rust Effect

**You can achieve the look of weathering steel style finishes for a fraction of the cost and on a wide range of surfaces with Resene FX Faux Rust Effect.**

Resene FX Faux Rust Effect is a waterborne coating designed to create a rust style effect on exterior and interior surfaces. Once applied, it looks like rust, a look that will continue to develop as the coating ages. Leave it as is for a living rust effect or protect it with a clear finish of diluted Resene Waterborne Aquapel.

It's best used in non-contact areas to avoid rubbing or marking. It's ideal for exterior architectural and landscaping features, and can also be used for non-contact interior feature areas such as feature rafters. It's best used in non-contact areas to avoid rubbing or marking.

Always work on a sample area first, applying two coats of Resene FX Faux Rust Effect basecoat then two coats of the Resene FX Faux Rust Effect Activator to set off the rusting effect. The colour intensity and variation of the rust effect depends on the application method and technique. The sooner the activator is applied after the basecoat is tacky, the deeper the rust effect. The more activator is applied the more impressive the rust effect.

The Resene FX special effects range has grown in range and application as for those looking for something new and different to make their homes and projects as individual as they are. From metallic to pearl shimmer, magnetic to crackle, chalk to write-on, blackboard to chalkboard, fluoro to glow-in-the-dark and now to rust, the only limit is your imagination.
